a.s. a LF SZU Bratislava

**“Príbeh vynárajúceho sa
ľadovca subklinickej FP”**

Mechanisms of Stroke in Atrial Fibrillation

BUT:

ARE ALL TYPES OF AF EQUALLY THROMBOEMBOLIGENIC ?

Tichá FP (“Silent Atrial Fibrillation”)

- **Silent AF** is an asymptomatic form of AF incidentally diagnosed during routine examination or manifesting as an AF-related complication, such as ischemic stroke or tachycardiomyopathy.
- The proportion of SAF to symptomatic AF can reach 12:1
- **SAF portends the same risk of ischemic stroke as symptomatic AF**
- **Real incidence of SAF is unknown = major gap in knowledge**

Percentage of patients in whom the 24-hour HM failed to identify AF recurrence vs. relative AF burden duration

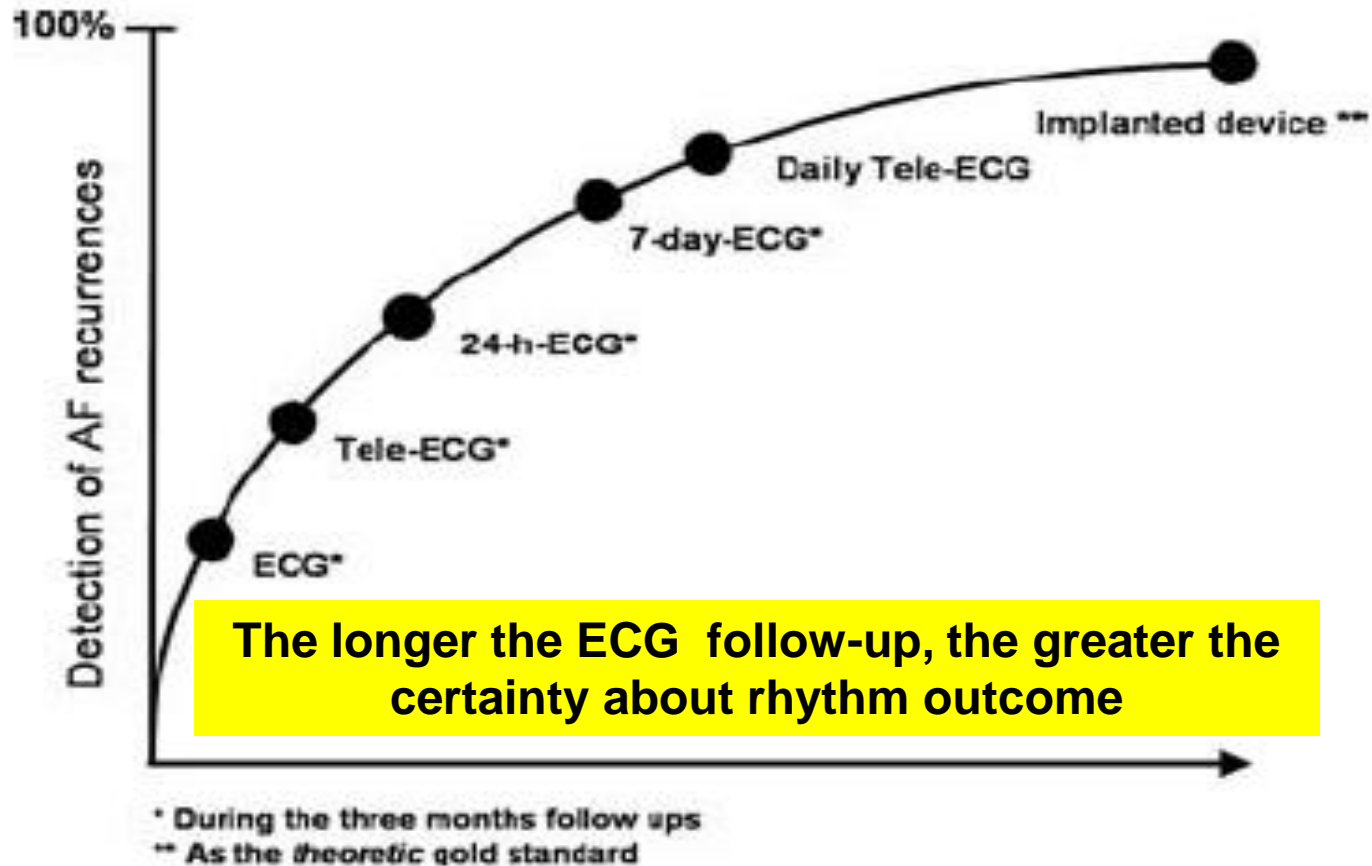

Intermittent ECG monitoring to detect AF - limitations

- Heavily biased by under-diagnosing AF events
- Very limited ability to characterize AF burden and temporal pattern (density)

BUT: The treatment of patient's symptoms as well as the prevention of stroke and heart failure is dependent on **accurate detection and characterization of AF**

Estimated correlation between F-U strategy and the rate of AF detection after RF ablation

Unmet needs for optimal AF management

- **UNDERDIAGNOSIS**

- search for optimal diagnostic tools for asymptomatic / atypically symptomatic AF

- **LIMITED RELIABILITY OF CURRENT RISK STRATIFICATION**

- **Neglected role of AF PATTERN**

- Paroxysmal vs. persistent vs. permanent

- **Neglected role of AF BURDEN**

- **CRITICAL BURDEN** - defining AF burden critical for increased thromboembolic risk indicated for therapy

- **BURDEN REDUCTION** - defining the impact (if any..) of burden reduction on prognosis

Subklinická fibrilácia predsiení At

Subklinická FP (SKAF) je asymptomatická forma krátkotrvajúcej FP diagnostikovanej počas dlhodobého kontinjuálneho ekg monitorovania

Subclinical Atrial Fibrillation

- Short-lasting SCAF detected after many weeks of monitoring represents a low overall burden of AF, which appears to convey an **increased risk of TE, albeit lower** than would be expected in clinical AF

CHADS ₂ Score	Rate of Ischemic Stroke/ Systemic Embolism (%/year)	
	Clinical AF	SCAF
1	1.9	0.56
2	2.8	1.29
>2	4.0-12.5	3.78

Cumulative rate of detection of different durations of subclinical atrial fibrillation (SCAF)

A Risk of Clinical Atrial Tachyarrhythmias

No. at Risk

Subclinical atrial tachyarrhythmias present	261	236	222	205	160	110
Subclinical atrial tachyarrhythmias absent	2319	2146	2064	1911	1544	1176

B Risk of Ischemic Stroke or Systemic Embolism

No. at Risk

Subclinical atrial tachyarrhythmias present	261	249	238	218	178	122
Subclinical atrial tachyarrhythmias absent	2319	2145	2070	1922	1556	1197

The Risk of Clinical Atrial Tachyarrhythmias and of Ischemic Stroke or Systemic Embolism, According to the Presence or Absence of Subclinical Atrial Tachyarrhythmias. ASSERT trial

Healey JS et al. *N Engl J Med* 2012;366:120-129

SCAF and stroke in the elderly

Table 3. Risk of Ischemic Stroke or Systemic Embolism after the 3-Month Visit, According to Baseline CHADS₂ Score and According to Whether Subclinical Atrial Tachyarrhythmias Were or Were Not Detected between Enrollment and the 3-Month Visit.

CHADS ₂ Score	No. of Patients	Subclinical Atrial Tachyarrhythmias between Enrollment and 3 Months						Hazard Ratio for Ischemic Stroke or Systemic Embolism with Subclinical Atrial Tachyarrhythmias (95% CI)*
		Present			Absent			
		<i>no. of patients</i>	<i>no. of events</i>	<i>%/yr</i>	<i>no. of patients</i>	<i>no. of events</i>	<i>%/yr</i>	
1	600	68	1	0.56	532	4	0.28	2.11 (0.23–18.9)
2	1129	119	4	1.29	1010	18	0.70	1.83 (0.62–5.40)
>2	848	72	6	3.78	776	18	0.97	3.93 (1.55–9.95)

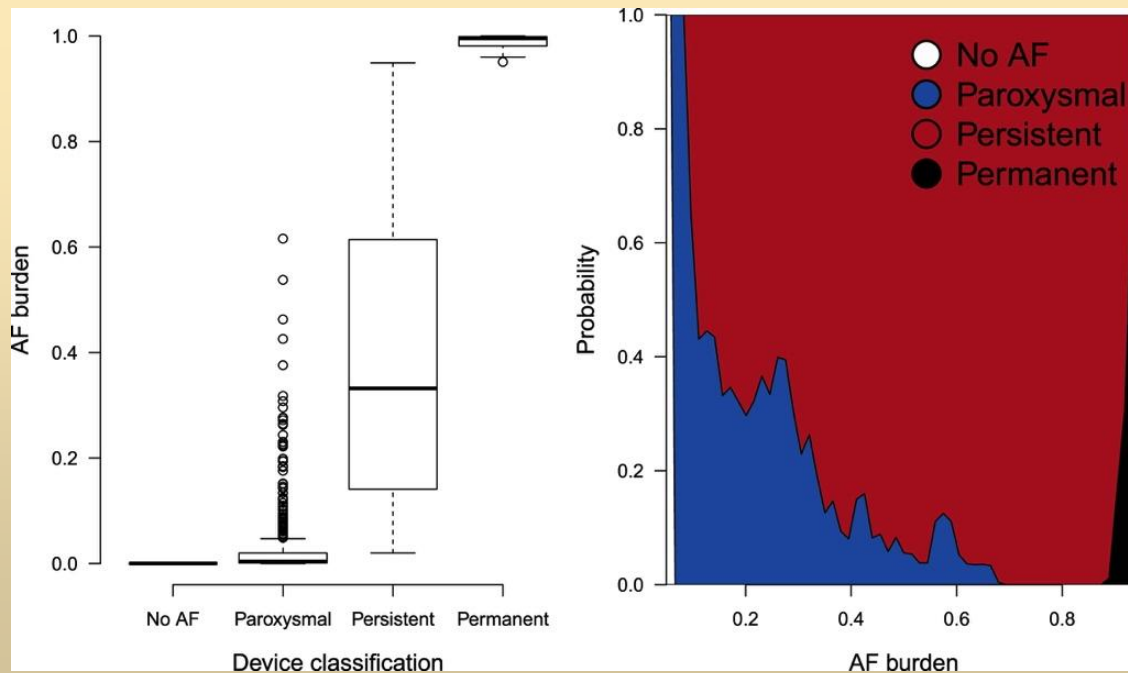

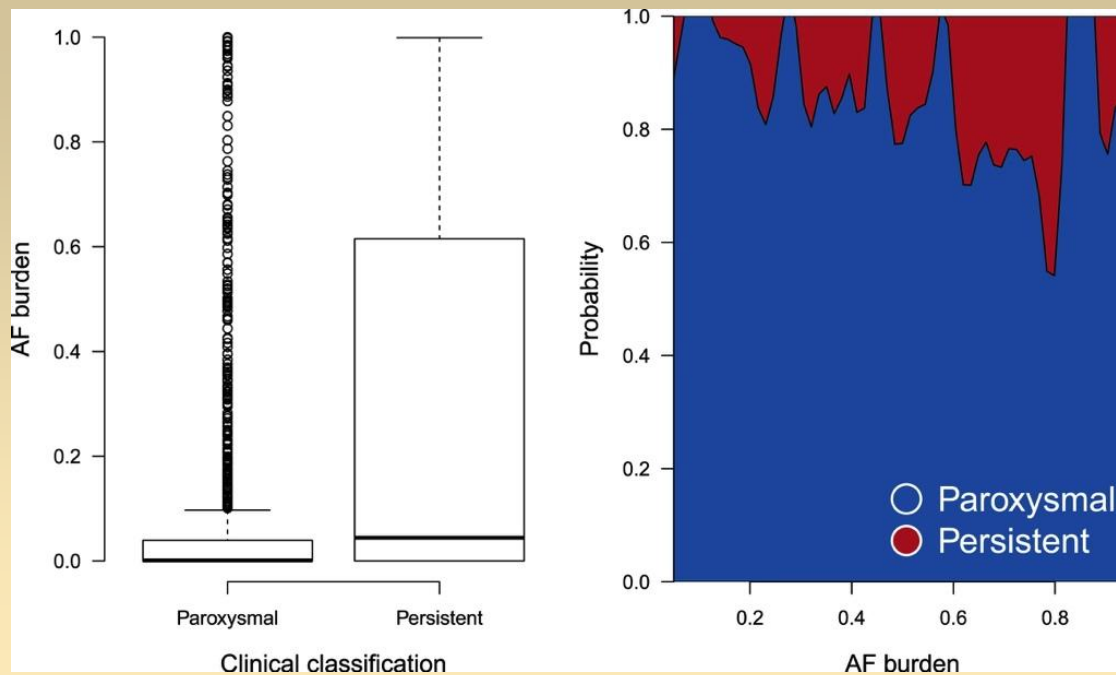

* The P value for trend is 0.35.

Risk of ischaemic stroke according to pattern of AF

Clinical classification

Device classification

Different stroke risk for non-paroxysmal versus paroxysmal AF?

- Non-paroxysmal atrial fibrillation is associated with a highly significant increase in TE and death.
- Impact of this observations:
 - Need to integrate AF type into scoring systems for TE risk
 - Need for new therapies to prevent AF progression – focus on early ablation of AF substrate !

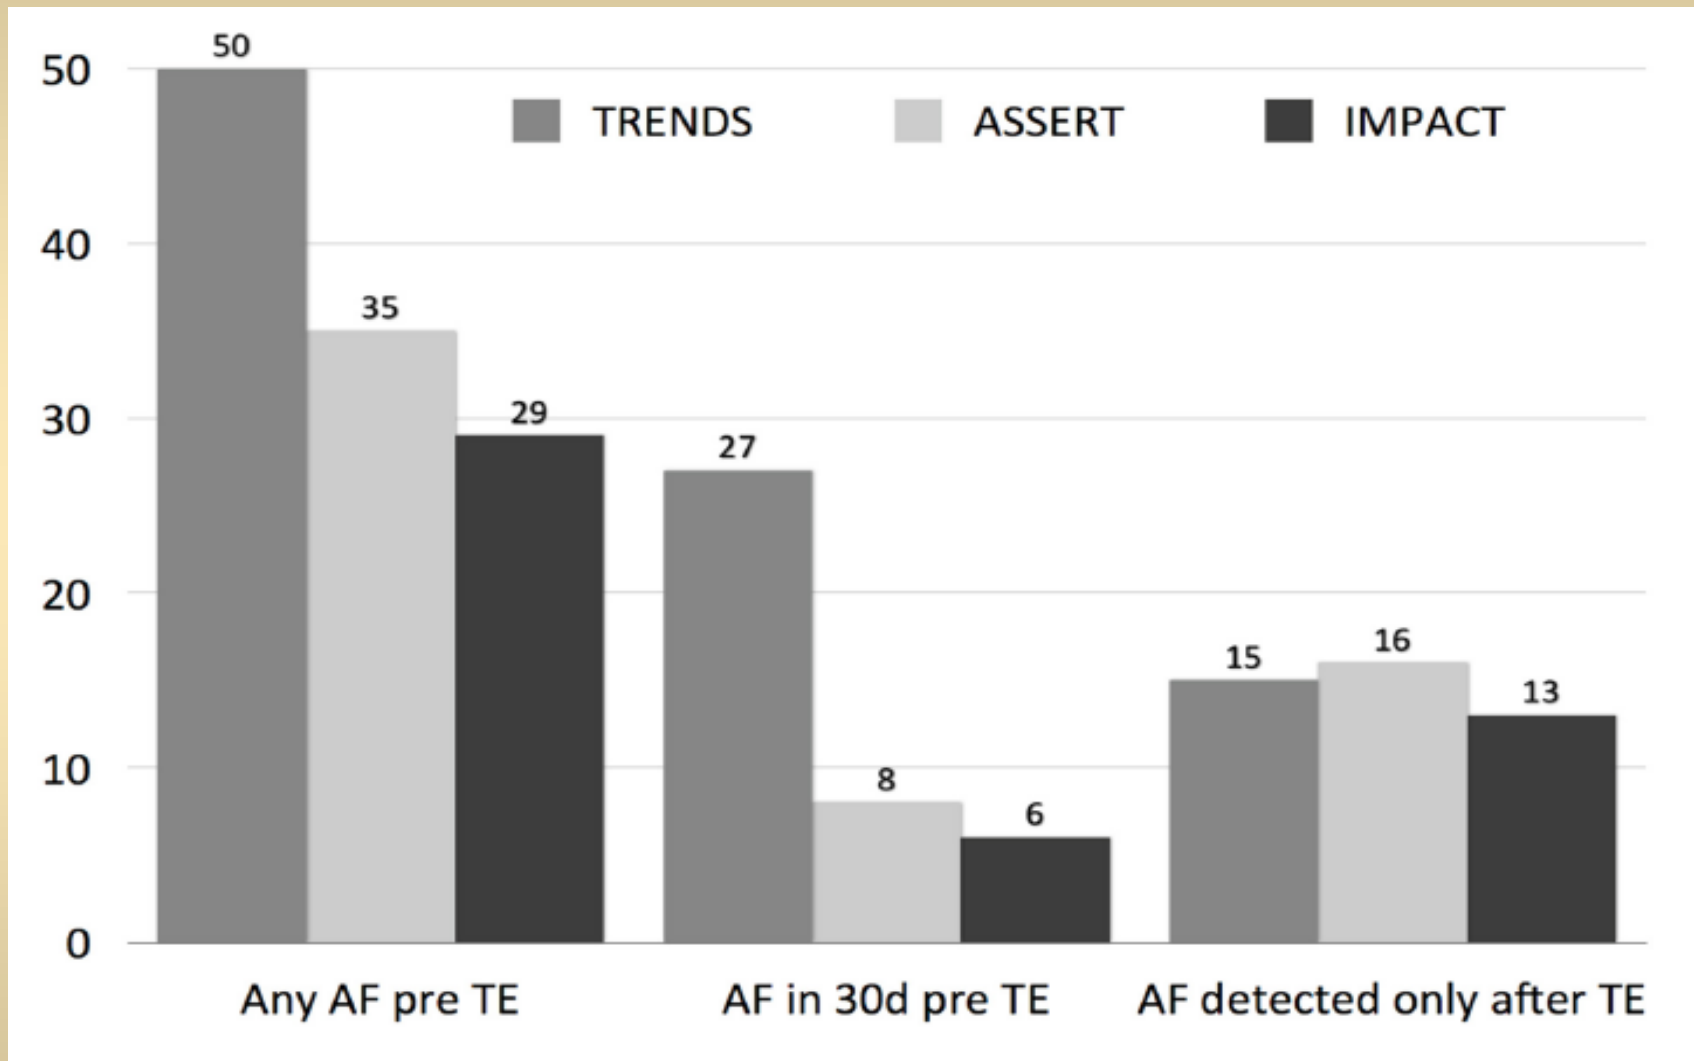

ASSERT : SCAF >24 h is associated with comparable risk of ischemic stroke / systemic embolism as clinical AF

Temporal Relationship Between Cardiac Implanted Electronic Device–Detected Atrial High-Rate Episodes and Stroke

Trial	Number of Patients With TE Event	Definition of AF Episode	Any AF Detected Before TE Event	AF Detected Only After TE Event	No AF in 30 Days Before TE Event
Boriani et al ⁴²	33/3438	5 min	21/33 (64%)	NA	12/33 (67%)
TRENDS ⁹	40/2486	5 min	20/40 (50%)	6/40 (15%)	29/40 (73%)
ASSERT ^{11,37}	51/2580	6 min	18/51 (35%)	8/51 (16%)	47/51 (92%)
IMPACT ¹⁹	69/2718	36/48 atrial beats \geq 200 beats per minute	20/69 (29%)	9/69 (13%)	65/69 (94%)
Turakhia et al ⁴¹	187/9850	\geq 5.5 h or \geq 6 min on any day 120 days previously	36/187 (19%) \geq 5.5 h 50/187 (26%) \geq 6 min	NA	NA

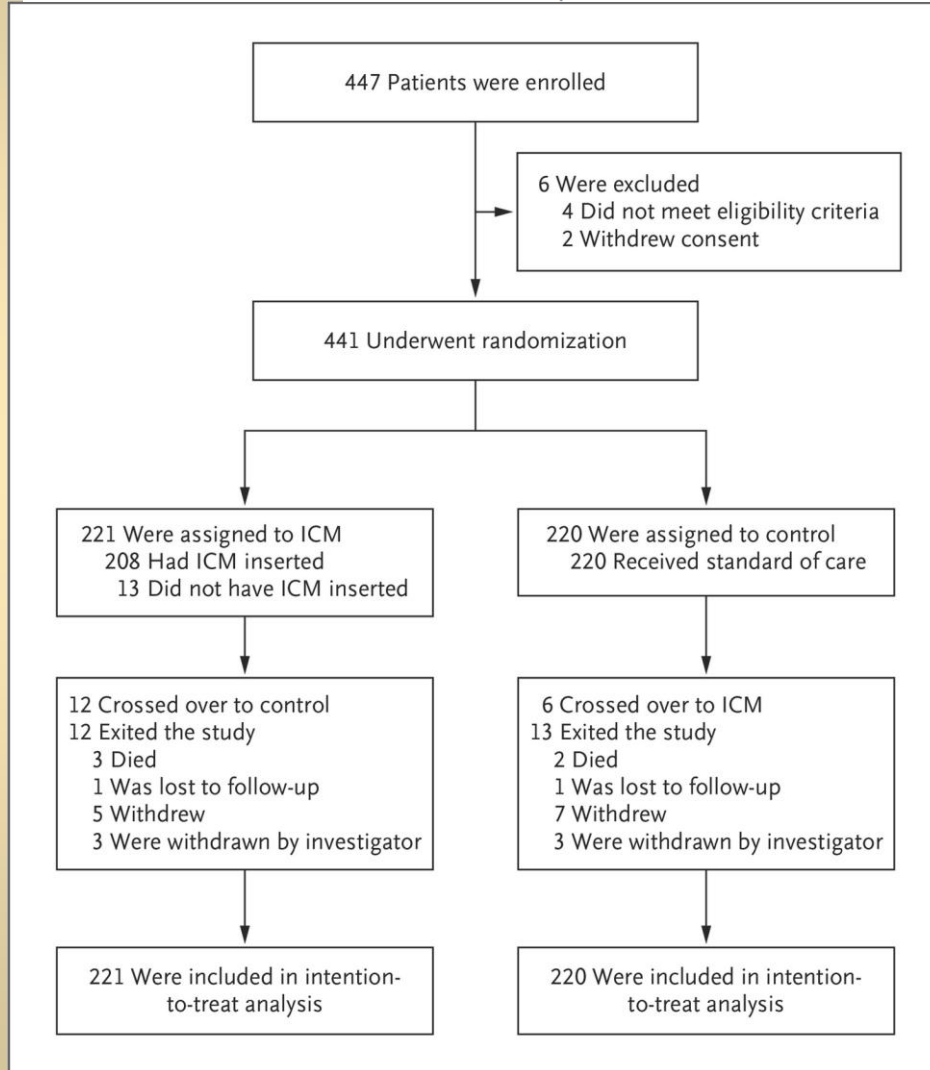

Lack of Temporal Proximity of Device-Detected AF to Stroke Events

Cryptogenic Stroke and Underlying Atrial Fibrillation

Tommaso Sanna, M.D., Hans-Christoph Diener, M.D., Ph.D.,

A Detection of Atrial Fibrillation by 6 Months

6.4x more AF detected

B Detection of Atrial Fibrillation by 12 Months

7.3x more AF detected

C Detection of Atrial Fibrillation by 36 Months

8.8x more AF detected

Je potrebné antikoagulovať všetkých pacientov s detekovanou subklinickou FP a CHA_2DS_2 -VASc kalkulovaným rizikom ?

- Z hľadiska rizika CMP nevieme kvantifikovať kritickú záťaž FP (burden)
- Pri extenzívnom ekg monitorovaní, ktoré sa stáva dostupné vďaka novým technológiám, bude dramaticky narastať prevalencia paroxyzmálnej FP v populácii
- Aplikácia našich súčasných zjednodušených predstáv o indikácii k antikoagulačnej liečbe hrozí jej masovým nadužívaním

UNMET NEED FOR ADVANCED AF DETECTION

- **Enhanced AF detection may allow for**
 - Long term monitoring in order to detect AF in persons with high probability of **undetected subclinical AF**
 - **Quantification of AF burden**
 - Assessing the role of **quantitative AF parameters** (pattern, burden) **for TE risk**

Future trends in enhanced AF detection

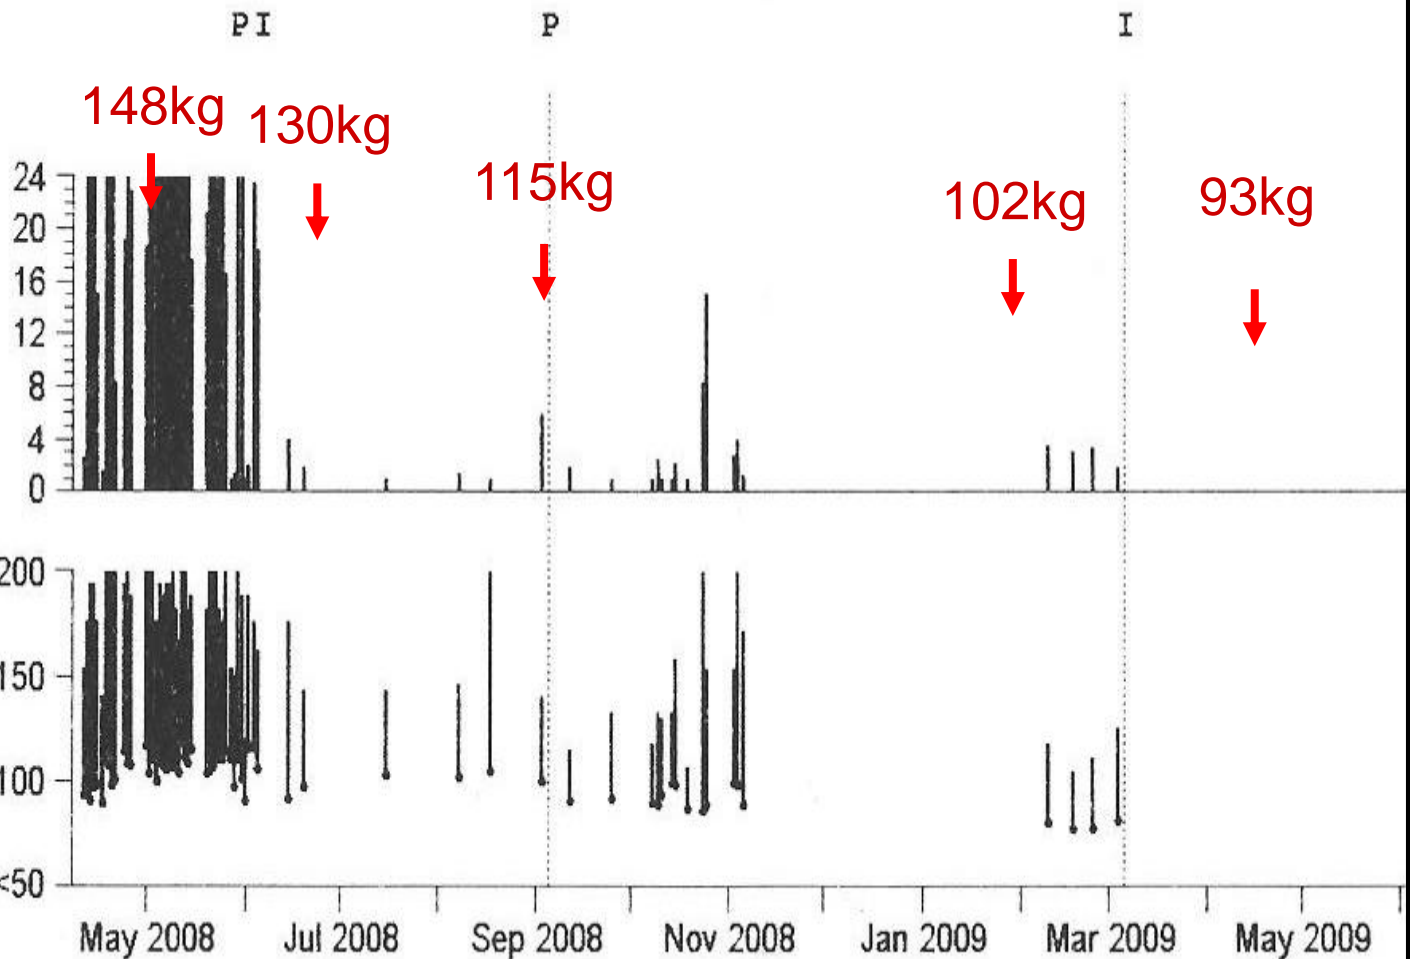

- Ecg long-term monitoring as “byproduct” with **implantable therapeutic pulse generators**
- **Dedicated ecg long-term monitoring**
 - **Implantable loop recorders**
 - Wearables
 - Smartphones

Prevalencia FP v bežnej populácii u 65747 skrínovaných v Belgicku počas týždňa srdcového rytmu medzi 2010 a 2014

1. Proietti M et al. *Europace* 2016;18:1779-86.
2. Mairesse GH et al. *Europace*. 2017;19(10):1589-1623

Subklinické formy FP

- ideálna millieu pre ILR a exaktnejšiu diagnostiku

- Miniaturization and remote monitoring create a very **user-friendly tool for monitoring**
- Highly effective search for AF post cryptogenic stroke – allows for effective prevention of TE
- Unprecedented precision in assessing effectiveness of any AA therapy – focus on ablation
- New insight into temporal characteristics and classification of AF
- **Key role for elucidating important knowledge gaps:**
 - **precise AF classification**
 - **treshhold AF burden for increased TE risk**
