

# **Iron deficiency and all-cause mortality after myocardial infarction**

MUDr. Dominik Jenča

Czech Cardiovascular Research and  
Innovation Days

4<sup>th</sup> November 2024

INSTITUT KLINICKÉ A EXPERIMENTÁLNÍ MEDICÍNY  
KLINIKA KARDIOLOGIE

## Introduction

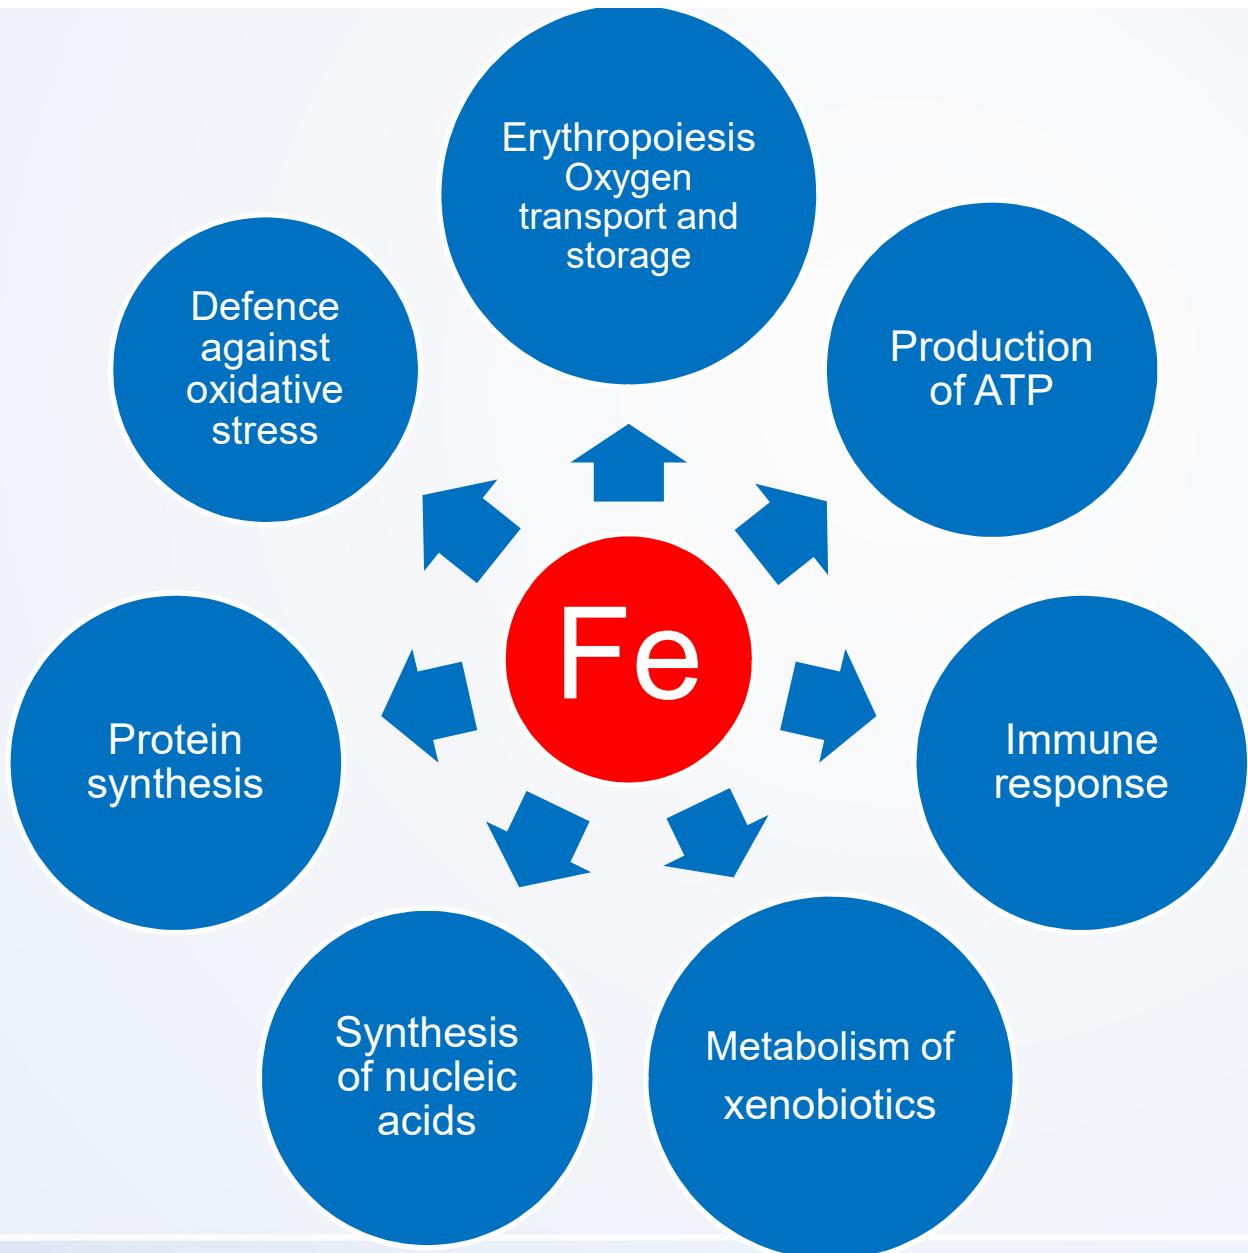

## Aims

## Methods

## Results

## Conclusion

# Iron deficiency (ID) in patients with myocardial infarction (MI)

Altered cellular metabolism

Increased oxidative stress and apoptosis

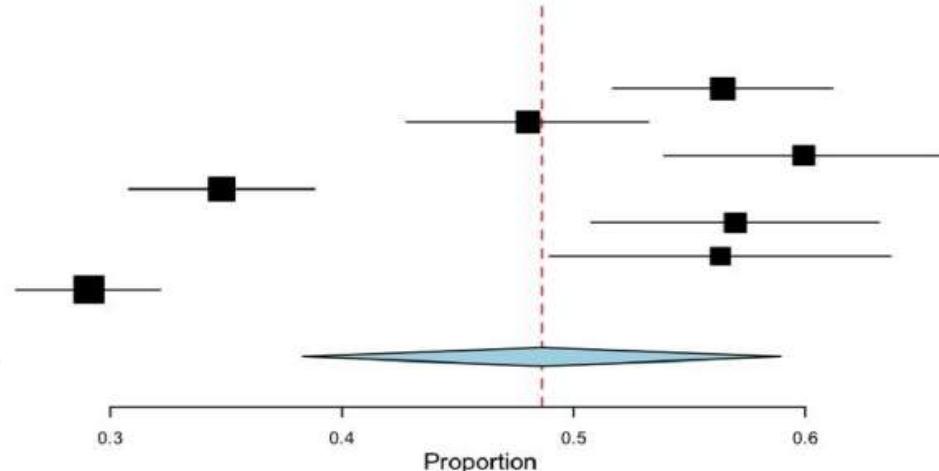

Decreased activity of cardioprotective signaling of eNOS/sGC/protein-kinase G

# ID in patients with MI

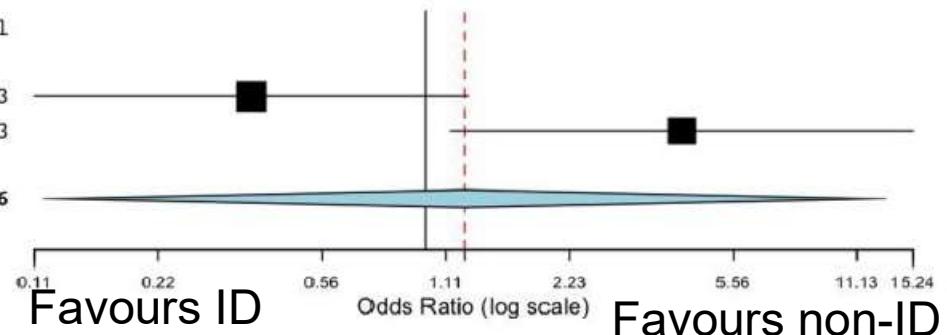

## A) Prevalence of iron deficiency

| Studies                               | Estimate (95% C.I.)  | Ev/Trt    |
|---------------------------------------|----------------------|-----------|
| Cosentino 2020                        | 0.564 (0.517, 0.612) | 237/420   |
| Fujinaga 2013                         | 0.480 (0.428, 0.532) | 169/352   |
| Gonzales-D'gregorio 2018              | 0.599 (0.539, 0.660) | 151/252   |
| Martins 2015                          | 0.348 (0.308, 0.388) | 189/543   |
| Merono 2017                           | 0.570 (0.508, 0.632) | 139/244   |
| Paeres 2018                           | 0.563 (0.490, 0.637) | 98/174    |
| Zeller 2019                           | 0.291 (0.260, 0.321) | 243/836   |
| Overall ( $I^2=96.86\%$ , $P<0.001$ ) | 0.486 (0.383, 0.589) | 1226/2821 |

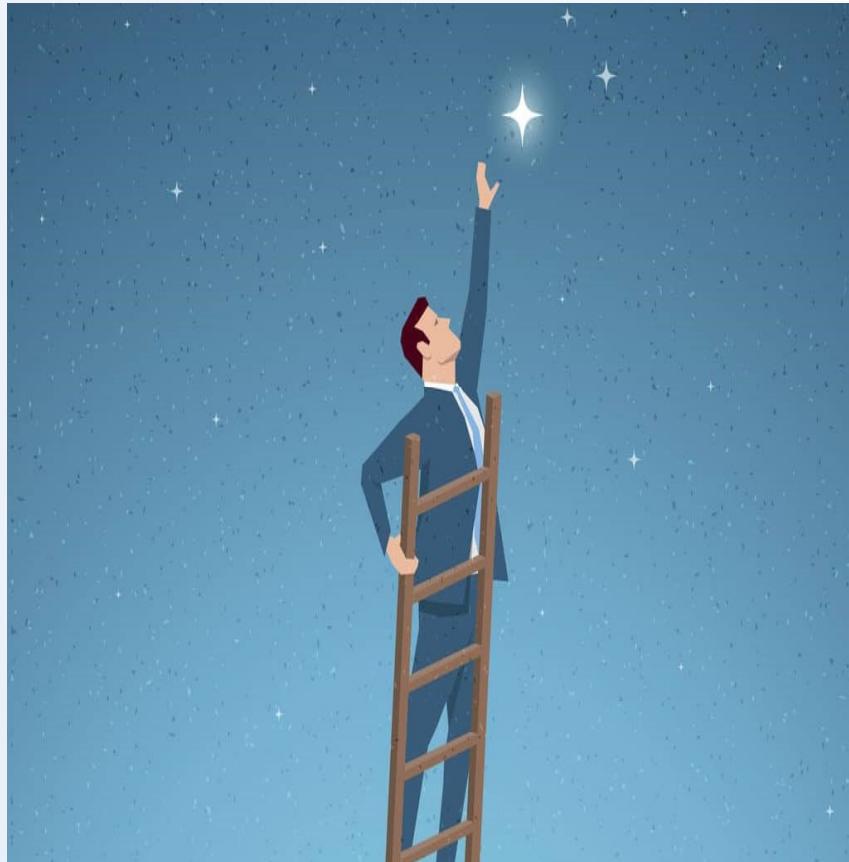

## B) In-hospital pooled cardiovascular and overall mortality

| Studies                               | Estimate (95% C.I.)   | Ev/Trt | Ev/Ctrl |
|---------------------------------------|-----------------------|--------|---------|
| Cosentino 2020                        | 0.376 (0.111, 1.267)  | 4/237  | 8/183   |
| Fujinaga 2013                         | 4.177 (1.145, 15.241) | 11/169 | 3/183   |
| Overall ( $I^2=85.85\%$ , $P=0.008$ ) | 1.239 (0.117, 13.134) | 15/406 | 11/366  |

# Aims

1. To compare association of different ID definitions with all-cause mortality in patients with first type of MI
2. To analyse additional predictive value of ID to GRACE score

# Methods

Prospective registry of patients admitted to IKEM with a diagnosis of ACS since June 2017

**1st day after  
admission:** study  
blood samples

INSTITUT KLINICKÉ A EXPERIMENTÁLNÍ MEDICÍNY  
KLINIKA KARDIOLOGIE

1939 patients  
admitted due to ACS

Exclusion of **301**  
patients with UA and  
2<sup>th</sup>-5<sup>th</sup> type of MI

Exclusion of **308**  
patients with a  
history of CAD

Exclusion of **174**  
patients with  
misssing/incomplete  
iron parameters

**1156**

patients analysed

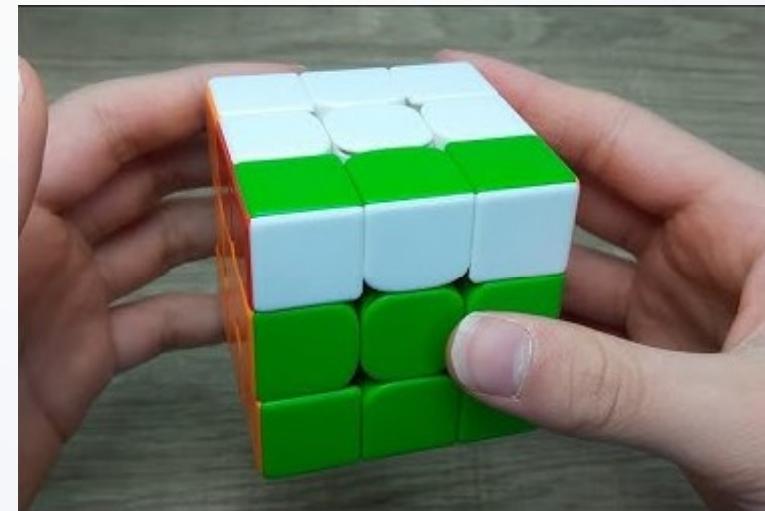

INSTITUT KLINICKÉ A EXPERIMENTÁLNÍ MEDICÍNY  
KLINIKA KARDIOLOGIE

# Methods

Decision tree analysis for cut-offs of  
ID parameters

Restricted cubic spline model

# Results

**1156 patients**

**Mean age  $64 \pm 12$  years**

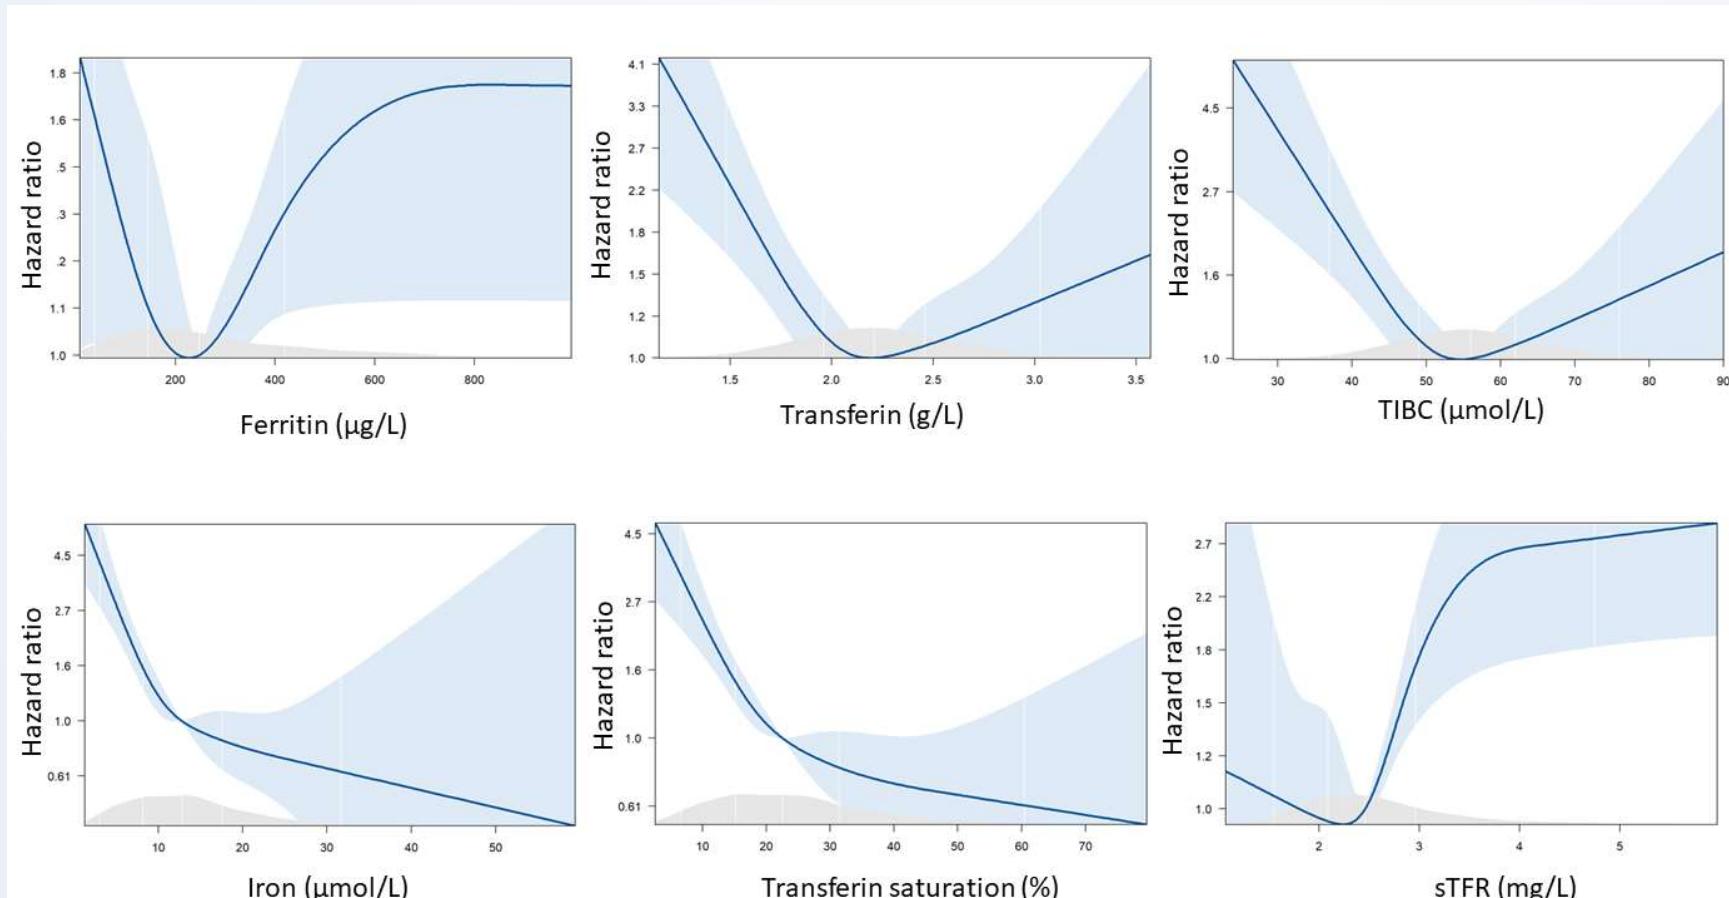

**Women 25 %**

**Median follow-up 3,4 years**

**Mortality 16,8 %**

# Results I

**Fig.1: Restricted cubic splines model for various ID parameters and all-cause mortality**

Adjusted for age. Grey area: histogram; modrá oblast: 95% confidence interval

# Results II

**Tab 1:** Comparison of additional predictive value of ID parameters to GRACE score

# PragueID criteria and prognosis of patients after myocardial infarction

**PragueID criteria: Iron  $\leq 12.8 \mu\text{mol/L}$  & sTfR  $\geq 3 \text{ mg/L}$**

Iron deficiency prevalence after MI: 58%

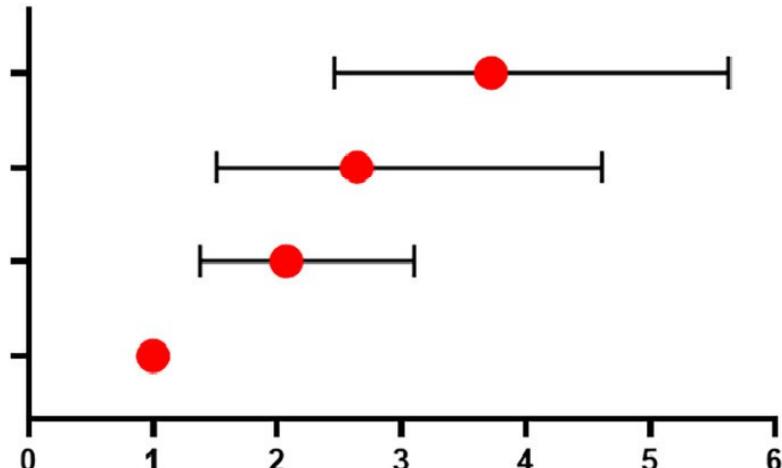

n= 189      Iron  $\leq 12.8 \mu\text{mol/L}$  & sTfR  $\geq 3 \text{ mg/L}$

n= 83      Iron  $> 12.8 \mu\text{mol/L}$  & sTfR  $\geq 3 \text{ mg/L}$

n= 394      Iron  $\leq 12.8 \mu\text{mol/L}$  & sTfR  $< 3 \text{ mg/L}$

n= 490      Iron  $> 12.8 \mu\text{mol/L}$  & sTfR  $< 3 \text{ mg/L}$

A for serum iron  
B for Pragued criteria

# Study limitations

- Single-centre study
- Retrospective analysis
- Single measurement of iron parameters

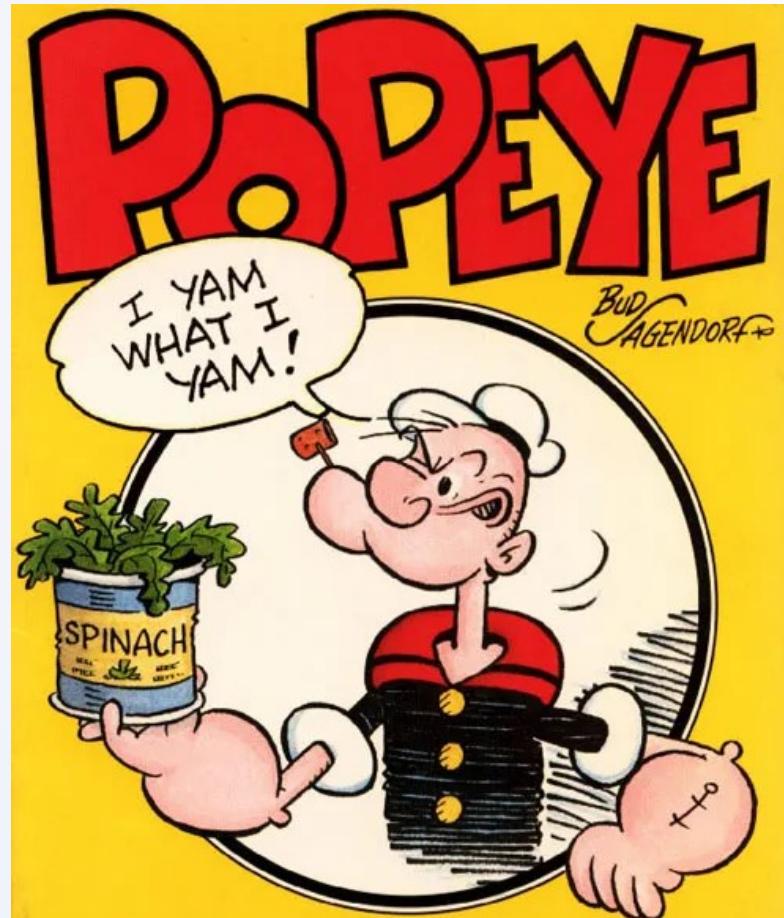

# Conclusions

- ID is very common among patients with MI
- ID criteria based on combination of S-Fe and sTfR provide the best predictive value for mortality
- The role of parenteral iron substitution in ID patients with MI has to be addressed in RCT

# Thank you for your attention
